$ What is airCLI?

```
                --                \                    --   ---
                    ---            \\            ---
   ---             --            ---->>>
        --                         //                --
  ---                             /                          ---
```

AirCLI is a command-line-based airport management system that simulates the complete passenger journey—from account creation and flight booking to baggage handling and airport security checks.

$ Functionalities

- User Module: Registration, Login, Profile Dashboard
- Banking Module: Simulating Bank Account Deposit, Withdraw
- Flight Search Module: Search flights & Ticket Generation
- Baggage Module: Baggage Creation, and Handling
- Security Module: Check Baggage by Security, Senior Security
- Admin Module: Create Flights, Role Validation, etc.
- Misc. Utility and File Handling Modules.

$ Technologies

IDE: Visual Studio Code
Compiler: GNU G++
Version Control: Git
Diagrams (UML or Flowchart): PlantUML

```
$ change color --light-purple
$ ./timeline
```

$

TIMELINE AND PROGRESS

A showcase of how much we have accomplished so far ...

Phase	Subtask	W 1	W 2	W 3	W 4	W 5	W 6	W 7	W 8	W 9	W 10	W 11	W 12	W 13	W 14
Planning Design	Requirement Analysis														
	Project Presentation														
	System Design & Architecture														
	UML & Flow Diagrams														
Core User Modules	User Account Module														
	Banking & Payment Module														
	Flight Search & Booking														
	Ticket Management
